BRAND IDENTITY SYSTEM / 2026

IRONRIDGE ROOFING & EXTERIORS

Built to protect. Made to last.

A premium, modern identity for an American roofing company — designed to communicate craftsmanship, confidence, and clear customer experiences.

CHARCOAL · LIMESTONE · EVERGREEN · COPPER

A reusable brand system for a live website demo

This guide defines the visual foundations for a high-trust roofing website template. Company details, service-area claims, reviews, credentials, warranties, and prices must be replaced with verified information before a real business uses the site.

01 / BRAND STRATEGY

Confident by design. Trustworthy by default.

Ironridge should feel like an established local roofing specialist with the polish of a premium home-services brand. The identity balances architectural warmth with operational clarity, so homeowners can move from research to estimate, deposit, project completion, and final invoice without feeling pressured.

Brand essence

Positioning	Premium, dependable roofing and exterior services for homeowners who value clear communication and lasting workmanship.
Personality	Grounded, capable, precise, warm, transparent.
Promise	A clear plan for protecting the home, from the first inspection to the final invoice.
Tagline	Built to protect. Made to last.

Voice and messaging

Sound like: clear, specific, calm, experienced. Explain the next step and what is included. Make pricing and payment timing easy to understand.

Avoid: exaggerated claims, fear-based storm messaging, fake urgency, unsupported “best in America” statements, and promises about insurance or financing approval.

Example headline

“A stronger roof starts with a smarter decision.”

Example supporting copy: “From a small leak to a full roof replacement, get a clear assessment, transparent pricing, and a plan built around your home.”

02 / COLOR SYSTEM

Warm neutrals. Quiet confidence.

Use warm architectural neutrals as the canvas, deep charcoal for structure, evergreen for action and reassurance, and copper as a small signature accent. Do not let copper compete with primary calls to action.

Ridge Charcoal

#202A27

Primary / structure

Navigation, footer, dark feature bands, high-contrast text.

Warm Limestone

#F4F0E7

Primary / canvas

Main page background, editorial sections, generous breathing room.

Evergreen

#315C4C

Action / trust

Primary buttons, links, selected states, trust details.

Burnished Copper

#B8754B

Accent / craft

Small icons, thin rules, labels, logo details.

Clean Paper

#FFFFFF

Surface

Forms, pricing cards, checkout surfaces; use selectively.

Sandstone

#DDD8CE

Border / divider

Card borders, field outlines, separators, quiet UI structure.

Recommended balance

Approximate visual distribution: 55% limestone, 25% charcoal, 15% white surfaces, and 5% combined evergreen/copper accents. Adjust by section; do not apply the ratio mechanically.

Accessible use

Use white text on charcoal or evergreen buttons. Use charcoal text on limestone and white. Copper is an accent, not a default text color for small copy. Verify contrast for every final UI state, including hover, disabled, error, and focus states.

03 / TYPOGRAPHY & LOGO

Editorial character. Practical clarity.

Primary typeface — DM Serif Display

Use for hero headlines, major section titles, and selective editorial moments. The serif adds warmth and a premium architectural feel. Keep headlines concise and avoid using it for dense UI.

A stronger roof starts with a smarter decision.

Secondary typeface — Manrope

Use for navigation, paragraphs, buttons, forms, service cards, prices, checkout explanations, and invoices. It stays crisp and legible across mobile and desktop.

Optional technical typeface — IBM Plex Mono

Reserve for invoice IDs, transaction references, project codes, and small metadata such as ESTIMATE #IR-1024. It is optional, not a third headline font.

ELEMENT	DESKTOP	MOBILE
Hero headline	64–76 px	42–48 px
Section headline	42–52 px	32–38 px
Card title	22–26 px	20–23 px
Body copy	16–18 px	16 px
Buttons / nav	14–16 px	15–16 px

Logo direction

Build a simple geometric roofline emblem paired with a strong wordmark. It must work in one color, in reverse on dark backgrounds, and as a small favicon. Keep the symbol clear at 24 px. Avoid stock shield clip art, cartoon houses, gradients, and overly detailed roof drawings.

Concept only: the final logo should be custom-drawn and checked for legibility, trademark conflicts, and use at small sizes.

04 / DIGITAL DESIGN SYSTEM

Every detail should feel intentional.

COMPONENT	SPECIFICATION
Header	Limestone background, charcoal wordmark, restrained navigation, evergreen estimate CTA.
Primary button	Evergreen fill, white text, 10 px radius, 48–52 px minimum height.
Secondary button	Transparent or limestone fill, charcoal border, clear focus treatment.
Cards	Limestone or white, subtle sandstone border, 12–16 px radius, minimal shadow.
Forms	White fields, 1 px sandstone border, 10 px radius, visible labels and error messages.
Spacing	88–112 px section spacing on desktop; 56–72 px on mobile; 1,200–1,280 px max content width.
Motion	Restrained 160–220 ms transitions. Respect reduced-motion preferences.
Icons	One consistent line-icon family. Use only when it improves comprehension.

Photography direction

Choose real American residential architecture, roof textures, inspection details, materials, and work-in-progress images. Favor warm natural light, deep roof tones, believable homes, and authentic craftsmanship. Use a consistent treatment and crop style. Avoid generic hard-hat stock photos, overprocessed HDR, fake before/after comparisons, and images that imply a project was completed by the business if it was not.

Homepage sequence

- **Hero:** concise value proposition, estimate CTA, service CTA, verified trust signals.
- **Core services:** repair, replacement, inspection, each with clear scope and next step.
- **How it works:** estimate → inspection/quote → deposit and scheduling → completion and final invoice.
- **Projects:** genuine project photos with accurate service type and location.
- **Pricing and financing:** explain what each displayed price covers; financing terms are subject to provider eligibility.
- **Proof:** verified reviews, credentials, warranty terms, service-area coverage.
- **Contact:** accessible estimate form, phone, email, service area, privacy policy and terms.

05 / PAYMENTS & TEMPLATE RULES

Premium design. Clear money moments.

Roofing projects are high-value and often involve multiple payment stages. The interface should explain each step without implying that a deposit automatically authorizes every future charge.

STAGE	DEMO OFFER	UX RULE
Inspection	$149 one-time inspection	State the inspection scope, booking terms, and what the customer receives.
Project deposit	$500 illustrative deposit	Explain how the deposit is credited, cancellation terms, and how payment-method storage is authorized.
Flat-rate service	$399 illustrative roof leak repair	List inclusions and exclusions; clarify that additional work requires approval.
Final invoice	Balance due after completed work	Deduct credited payments, itemize remaining charges, and offer supported auto-charge with valid authorization or manual payment.

Whop implementation guardrails

• Use Whop Payments only. Checkout must use Whop's supported CheckoutElement or PaymentElement, ExpressCheckoutElement, and required BrandingElement.

• Wire the estimate request form to the Whop Leads API and show a clear success/error state.

• Use the supported setup-intent flow for card-on-file where available; make consent and future-charge terms explicit.

• Create final invoices through the Whop Invoices API. Charge a stored method only when supported and properly authorized; otherwise send the invoice for manual payment.

• Fire and verify the custom tracking events: estimate_requested, service_viewed, and deposit_started. Whop's automatic page-view and checkout events remain separate.

• Never promise financing approval or display provider logos as a guarantee that a payment method will be available.

Reusable template architecture

Keep brand content in a single configuration layer: company name, logo, phone, email, service area, services, pricing, testimonials, licenses, warranty wording, financing disclosures, and image assets. Keep the page structure and Whop payment logic reusable. Replace demo prices and business claims with verified company data before launch.

06 / HANDOFF & QA

Design tokens and launch checklist

Core CSS tokens

```
--color-primary: #202A27;
--color-background: #F4F0E7;
--color-accent: #315C4C;
--color-copper: #B8754B;
--color-surface: #FFFFFF;
--color-text: #303834;
--color-muted: #777B73;
--color-border: #DDD8CE;

--font-heading: "DM Serif Display", Georgia, serif;
--font-body: "Manrope", sans-serif;
--font-mono: "IBM Plex Mono", monospace;

--content-width: 1280px;
--radius-card: 16px;
--radius-button: 10px;
--radius-input: 10px;
```

Before a real client launch

- ■ Confirm business name, logo, domain, and trademark clearance.
- ■ Replace placeholder contact information and demo service areas.
- ■ Verify license, insurance, warranty, review, and financing statements.
- ■ Confirm all displayed prices, tax treatment, deposits, refund/cancellation terms, and scope language.
- ■ Test responsive layouts, keyboard navigation, contrast, form validation, and loading/error states.
- ■ Complete a sandbox/test checkout with Whop payment and branding elements.
- ■ Verify that estimate requests create leads in the correct Whop account.
- ■ Verify setup-intent/card-on-file behavior and the final invoice path.
- ■ Verify all three custom tracking events with real test interactions.
- ■ Record the required demo walkthrough and deliver source code with environment variables documented securely.

Brand identity summary

IRONRIDGE combines Ridge Charcoal (#202A27), Warm Limestone (#F4F0E7), Evergreen (#315C4C), and Burnished Copper (#B8754B), with DM Serif Display headlines and Manrope UI typography. The result is an architectural, premium, approachable identity designed for trust across marketing, service selection, Whop checkout, and invoicing.

This is a creative direction for a fictional demo brand. It is not legal, licensing, financing, or payment-processing advice. Confirm current Whop API behavior and requirements against the official documentation before implementation.
